Documentation

Changing the backgrounds

The backgrounds are located in "assets/img/backgrounds". Upload in this folder all the backgrounds you want and then open the "scripts.js" file (assets/js/scripts.js). Change the backgrounds from the code:

```
$('.top-content').backstretch([
    "assets/img/backgrounds/1.jpg"
  , "assets/img/backgrounds/2.jpg"
  , "assets/img/backgrounds/3.jpg"
  ], {duration: 3000, fade: 750});
```

Setting up the Twitter feed

In the "scripts.js" file find the "Show latest tweet" piece of code. Find the line:

```
username: 'anli_zaimi',
```

Delete "anli_zaimi" and insert your username.

Create a new twitter app from here: https://dev.twitter.com/apps

You can follow this article that shows how to create a new twitter app:

http://iag.me/socialmedia/how-to-create-a-twitter-app-in-8-easy-steps/

Now, go to assets/twitter and open the file "index.php".

Find this code:

```
// Your Twitter App Consumer Key

private $consumer_key = 'YOUR_CONSUMER_KEY';

// Your Twitter App Consumer Secret

private $consumer_secret = 'YOUR_CONSUMER_SECRET';

// Your Twitter App Access Token

private $user_token = 'YOUR_ACCESS_TOKEN';
```

```
// Your Twitter App Access Token Secret
private $user_secret = 'YOUR_ACCESS_TOKEN_SECRET';
```

Enter the keys that you got when you created the twitter app. You can also enable caching from the file above. Your cache directory must be writable by PHP.

Setting up the email subscription form

Open the "subscribe.php" file (assets/). From there you can set up the email where you want to receive the notifications when new users subscribe. You can also set up the message to display on the page when the user subscribes.

Setting up the contact form

Open the "contact.php" file (assets/) and set up the email where you want to receive the messages.

Setting up the Google Map

Open the "scripts.js" file (assets/js/scripts.js) and set up your coordinates in this line:

var position = new google.maps.LatLng(45.067883, 7.687231);

Setting up the social icons

This template comes with 25 square social icons coded in HTML/CSS3 and ready to use (from the premium icon set "Ultimate Flat Social Icon Set", http://www.psdicons.net/ultimate-flat-social-icon-set/).

You just have to insert the icons' names like in the code below (index.html file) and the links of your social media profiles:

```
...
<a class="ultm ultm-facebook ultm-48 ultm-square ultm-gray-to-color" href=""></a>
<a class="ultm ultm-twitter ultm-48 ultm-square ultm-gray-to-color" href=""></a>
<a class="ultm ultm-google-plus-1 ultm-48 ultm-square ultm-gray-to-color" href=""></a>
....
```

You'll find the names of the 25 available icons in the file "ultm-bg-images-48.css" (assets/ultimate-flat-social-icons/ultm-css).

Changing the logo

You can find the logo image in the "img" folder (assets/img). Replace it with your logo.

Changing the favicon and apple touch icons

You can find the favicon and apple touch icons in the "ico" folder (assets/ico). Just replace them with the icons you want.

Customizing the portfolio

You can find the portfolio images in the "portfolio" folder (assets/img/portfolio). Upload in this folder the images you need and add their names in the "index.html" file. A portfolio item is created using this code:

```
<div class="portfolio-box design">
   <img src="assets/img/portfolio/1.jpg" alt="" data-at2x="assets/img/portfolio/1.jpg">
   <div class="portfolio-box-text-container">
      <div class="portfolio-box-text">
         <h3>Project 1</h3>
         <p>January 2014</p>
      </div>
   </div>
</div>
```

From the code you can change the image source and text. Using the data-at2x attribute, you can specify another image (with higher resolution) to use when the site is viewed on retina devices.

The red class in the code above is used for the portfolio filters. Here is an example of the filters' code:

```
<div class="col-sm-12 portfolio-filters">
   <a href="#" class="filter-all active">All</a> /
   <a href="#" class="filter-design">Design</a> /
   <a href="#" class="filter-development">Development</a>
   ...
```

Note the red class, "filter-**design**".

Changing the "testimonials", "about us" and "blog" images

You can find the "testimonials" images in the "testimonials" folder (assets/img/testimonials), the "about us" images in the "team" folder (assets/img/team) and the "blog" images in the "blog" folder (assets/img/blog). Upload in these folders the images you need and add their names in the "index.html" file.

Other settings

The plugins used in this template come with a lot of other settings. If you want to use these settings or you need other documentation, you can find all the plugins' homepage links in the "Attributions.txt" file (attributions/Attributions.txt).

How to contact me?

For every question, information or suggestion here are some useful links you can use to contact me:

Website: http://azmind.com/
